

AMENDMENTS TO THE SPECIFICATION

Please replace the abstract from the International Application with the following rewritten new abstract, a clean version is attached hereto on a separate sheet.

ABSTRACT

The present invention relates to methods and arrangements for rapid dialing in a telecommunication system that requires an indication of a B-number termination to establish a connection. The system is communicating with a telephone set (POTS) without ability to indicate such termination. ~~The method comprises the following steps:—~~ A B-number is dialed using said telephone set (POTS).— A B-value (719) composed of the so far dialed digits is compared with a list (MRD) of records (11, 719, 001877) stored in a database (DB) in the system. ~~[[—]]~~ Conformity A match is found between the composed B-value (719) and a record (719) in said list (MRD), which found record points to a numeral (7) representing the total number of digits in the complete B-number.
